2. Since there is only single file, there need not be relationships or custom tables for the data.

The screenshot shows the IBM Cognos Analytics interface. The top navigation bar includes the logo, a search bar, and a user profile icon. A maintenance notification is displayed below the navigation bar. The main area is divided into a left sidebar and a central grid. The sidebar shows a 'Data module' with a search bar and a list of fields: Row ID, Order ID, Order Date, Ship Date, Ship Mode, Customer ID, Customer Name, Segment, City, State, Country, and Postal Code. The central grid displays a table with 10 rows and 7 columns: Row ID, Order ID, Order Date, Ship Date, Ship Mode, and Customer ID. The data is loaded from a file named 'Global\_Store2.csv'.

Row ID	Order ID	Order Date	Ship Date	Ship Mode	Customer ID

3. To Prepare the data, we need to verify it is clean. There must be no null values. If there are null values, there will be empty data.

The screenshot shows the IBM Cognos Analytics interface with a context menu open over the 'Order ID' column. The menu options are: Filter..., Create data group..., Create navigation path..., Split..., Hide from users, Remove, Format data..., Clean..., Sort descending, Sort ascending, and Properties. The data table is the same as in the previous screenshot.

Row ID	Order ID	Order Date	Ship Date	Ship Mode	Customer ID

3. Once cleaned, the data is saved.

## DATE CALCULATIONS AND NAVIGATION PATHS

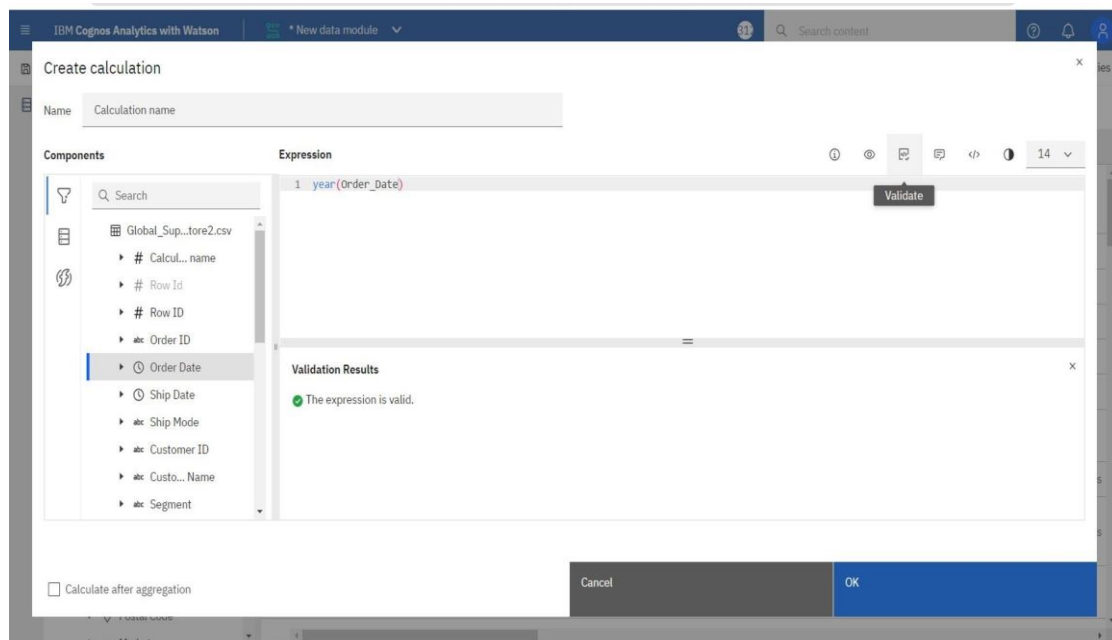

Once you load the data, we need to Prepare the data.

**a. Prepare Calculations of Year, Month, Day fields and also the related Navigation path**

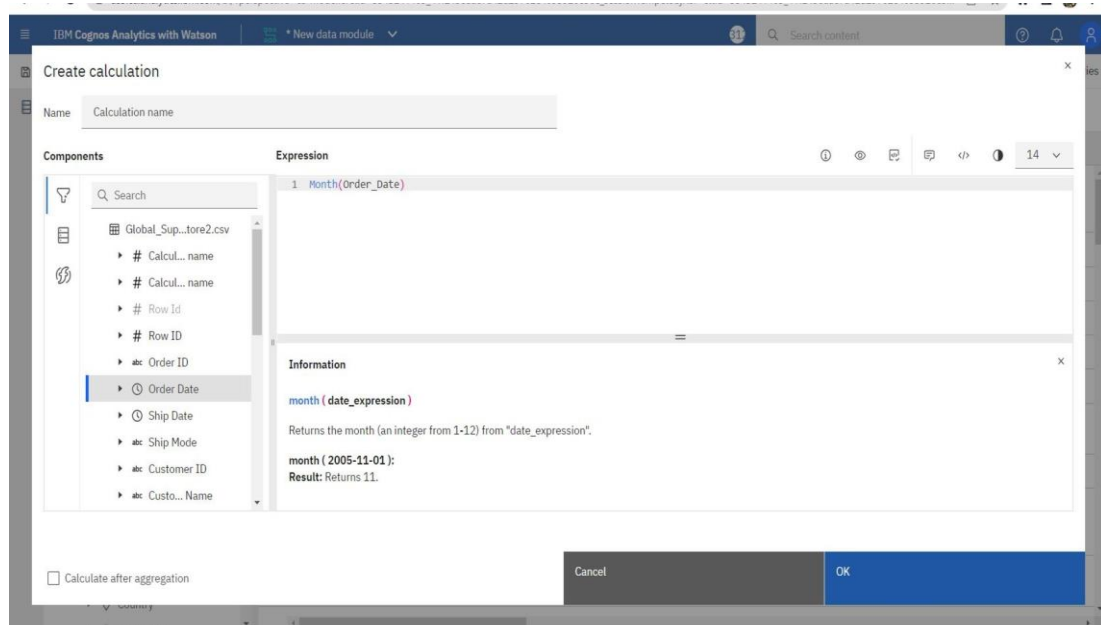

**b. Create a Few more Calculations – Target Sales, Min Sales, Max Sales, Middle Range Sales.**

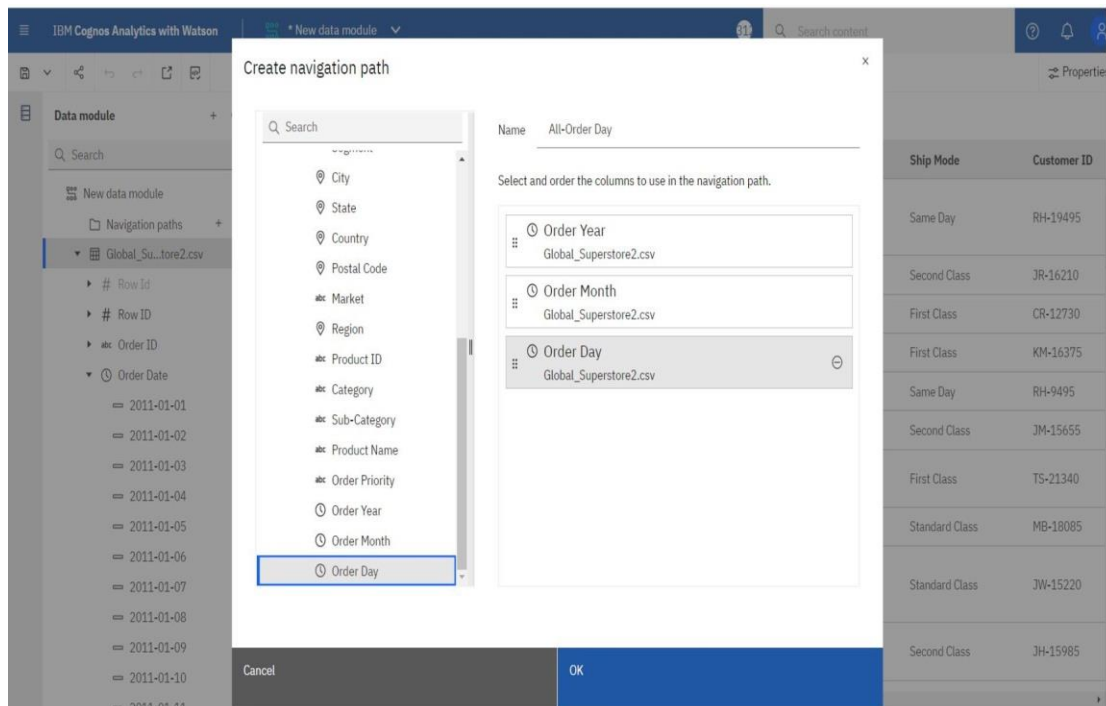

1. Right click> calculation> type expression> validate> Set Name as 'Order Year'

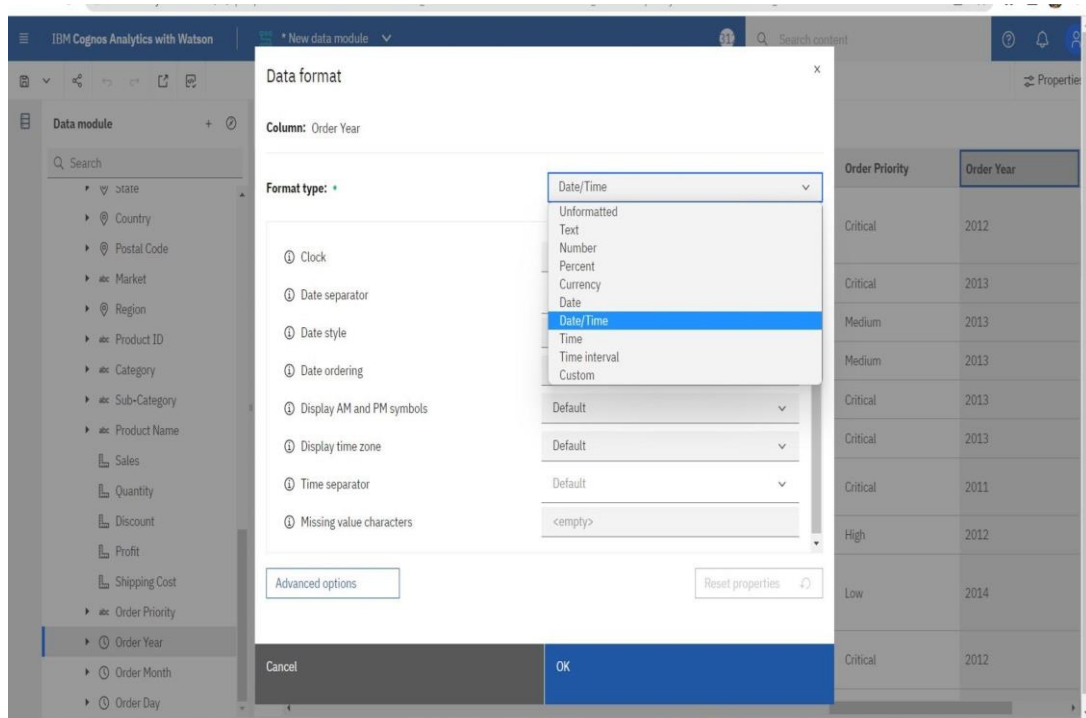

2. Similarly, 'OrderMonth', 'OrderDay' and 'All'  
OrderYear -> Year (Order\_Date)  
OrderMonth -> Month (Order\_Date)  
OrderDay -> Day (Order\_Date)  
All -> All

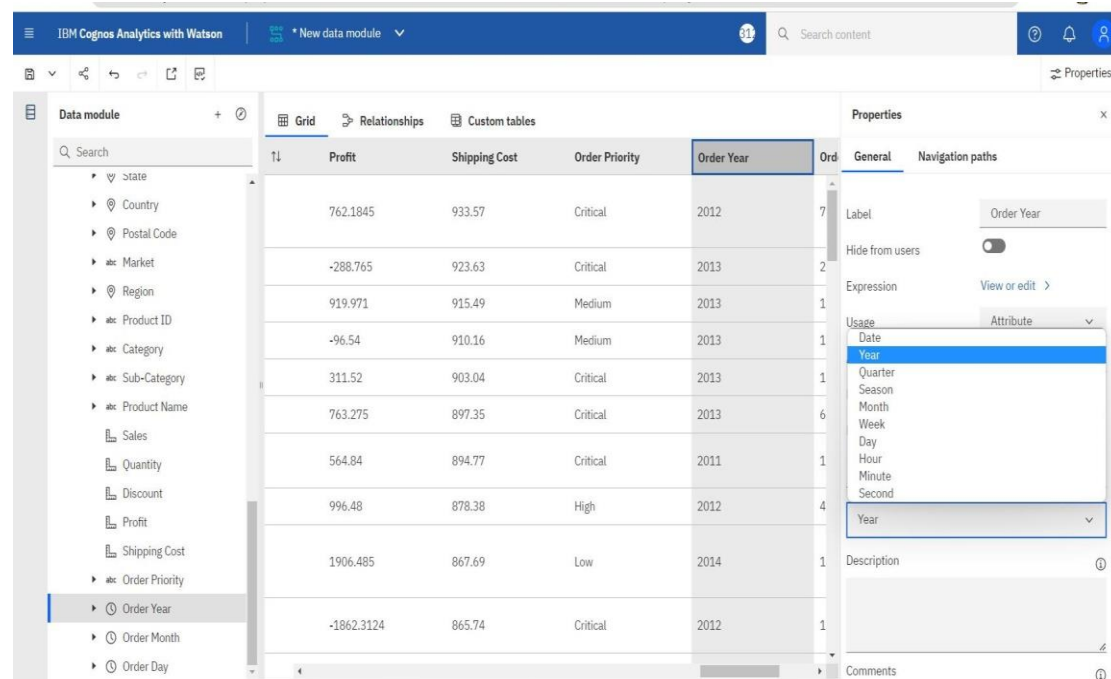

### 3. Right click on create navigation path

### 4. Data format > Date/Time

5. Properties> Usage-> Attribute  
 Aggregate-> Count Distinct  
 Data Type-> Integer  
 Represents-> Time, (Year, Month, Day Respectively)  
 Display Options-> Show Members  
 This way it becomes a Numerical data Type

6. Hence calculations for day, month and year are completed.

Once you load the data, we need to Prepare the data.

- Prepare Calculations of Year, Month, Day fields and also the related Navigation path
- Create a Few more Calculations – Target Sales, Min Sales, Max Sales, Middle Range Sales.

7. Similarly, calculations for Target sales, Min sales, Max Sales and Middle range sales are done

Min sales-> minimum (Sales)

Max sales, Target sales-> maximum (Sales)

Middle range sales-> average (Sales)

**Minimum(Sales)**

## Maximum(Sales)

## Middle Range (Sales)
